

Figure 1: Location of drill holes, showing recent results from CSD-15-013 and progress of CSD-15-014 and CSD-15-015.

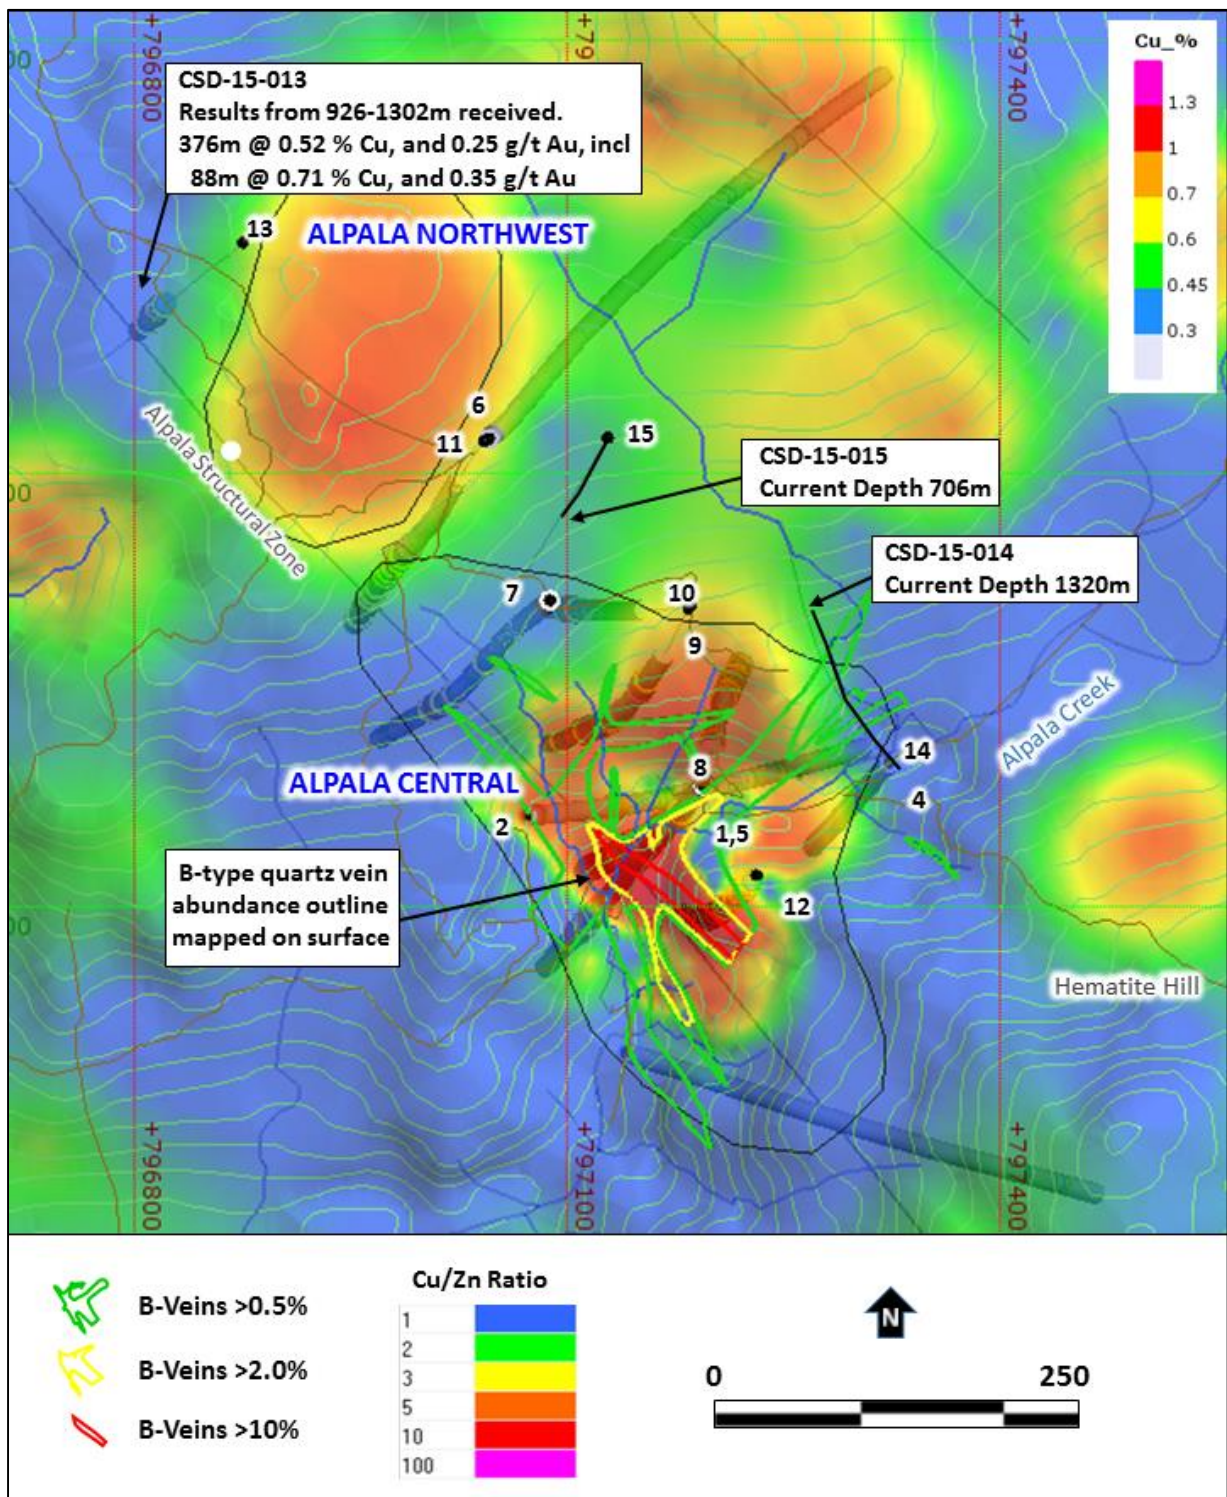

Figure 2: Location of drill holes, showing soil copper/zinc results and surface abundance outline of B-type quartz vein abundance.

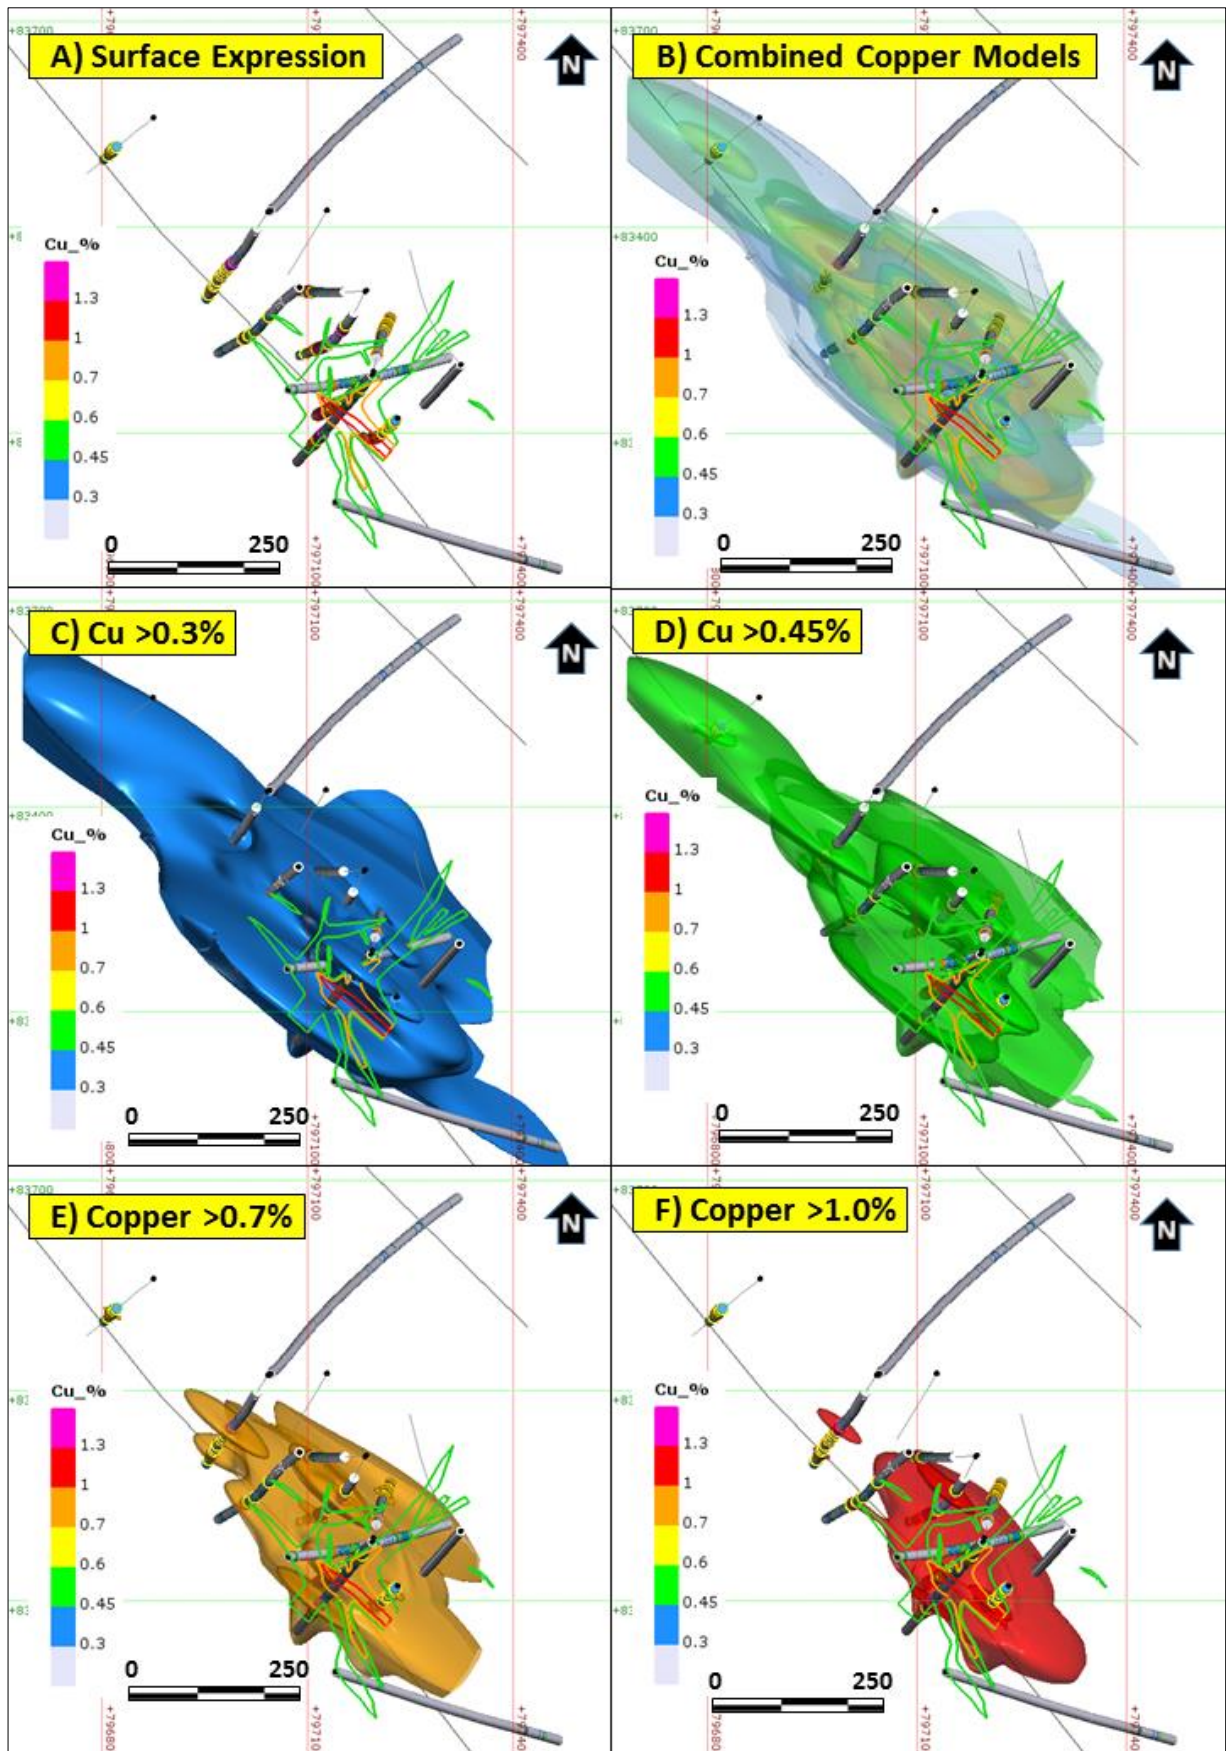

Figure 3: Preliminary copper modeling, showing abundance of B-type quartz veins on surface (A) and isosurfaces created at various copper cut-off grades (B to F).

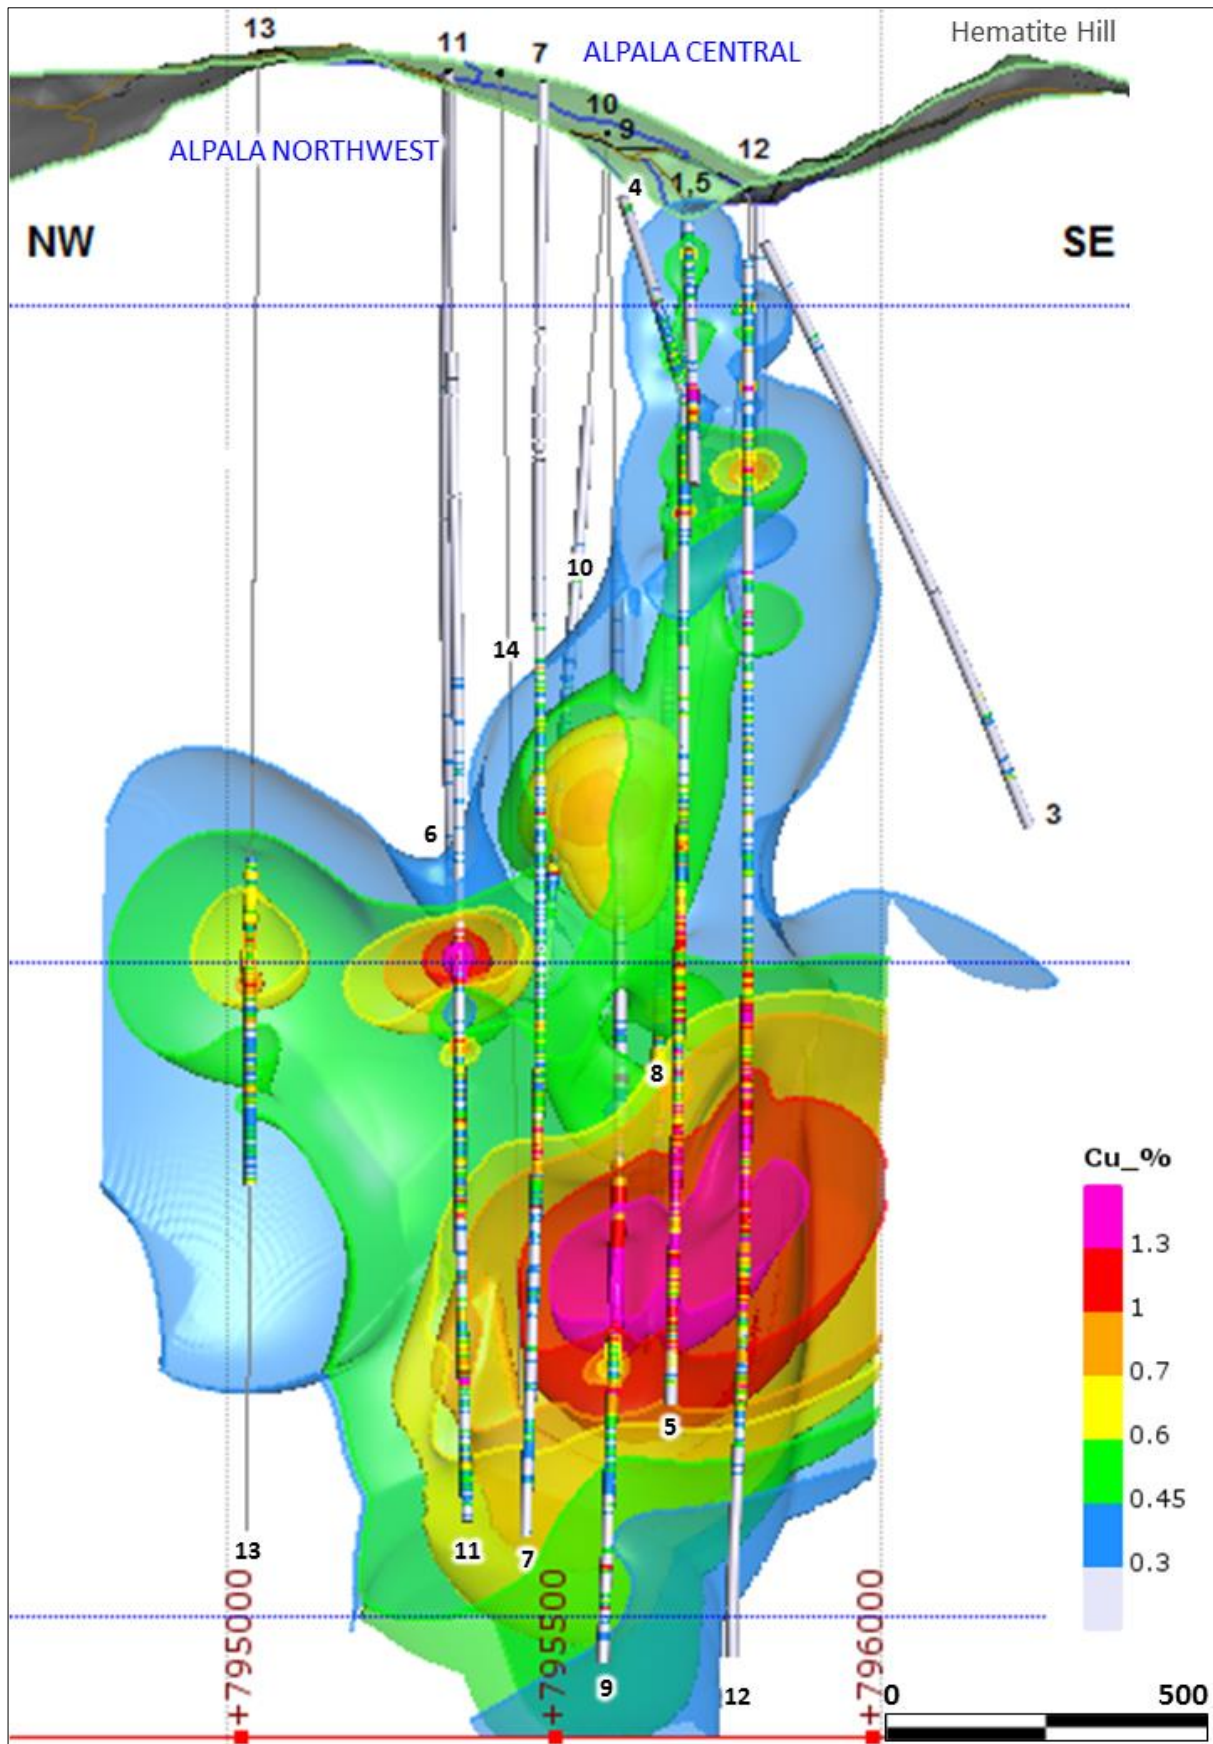

Figure 4: Northwest-southeast longitudinal section slice along the Alpa Structural Zone, showing the geometry of copper and gold mineralization defined by 3D copper modeling.
