

Figure 1: Cross-section (oriented WNW-ESE; see Figure 2) through the Limon porphyry Au-Cu prospect, illustrating key geological features that suggest an extensive underlying mineralized porphyry Au-Cu system below the leached illite-altered lithocap. Strongly mineralized diorite outcrops as a window through an overlying and altered rhyodacite body.

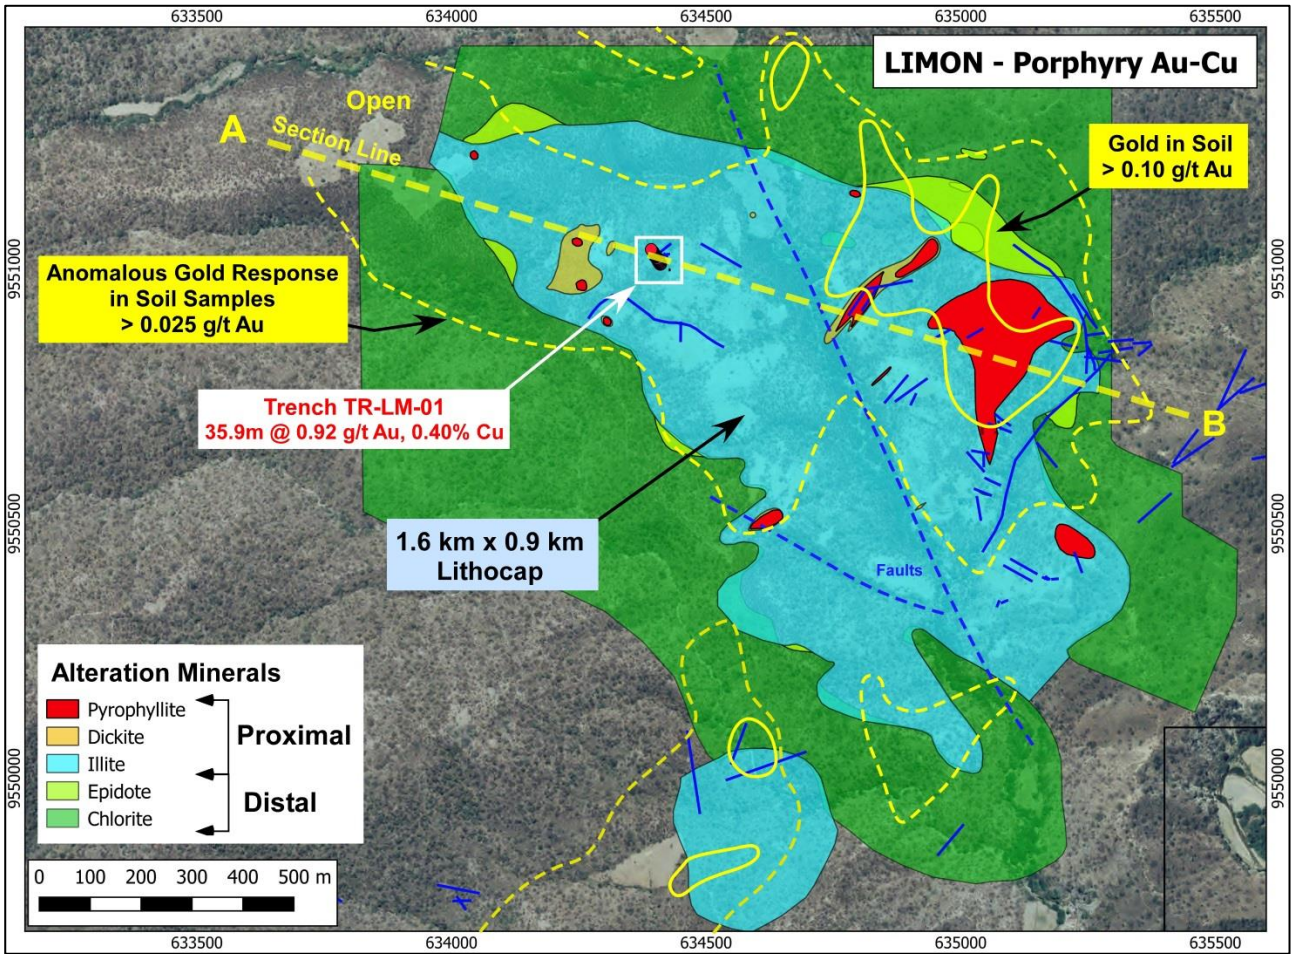

Figure 2: Alteration map covering the 1.6km x 0.9km lithocap at the Limon porphyry Au-Cu prospect, location of the cross-section shown in Figure 1 and trench TR-LM-01.

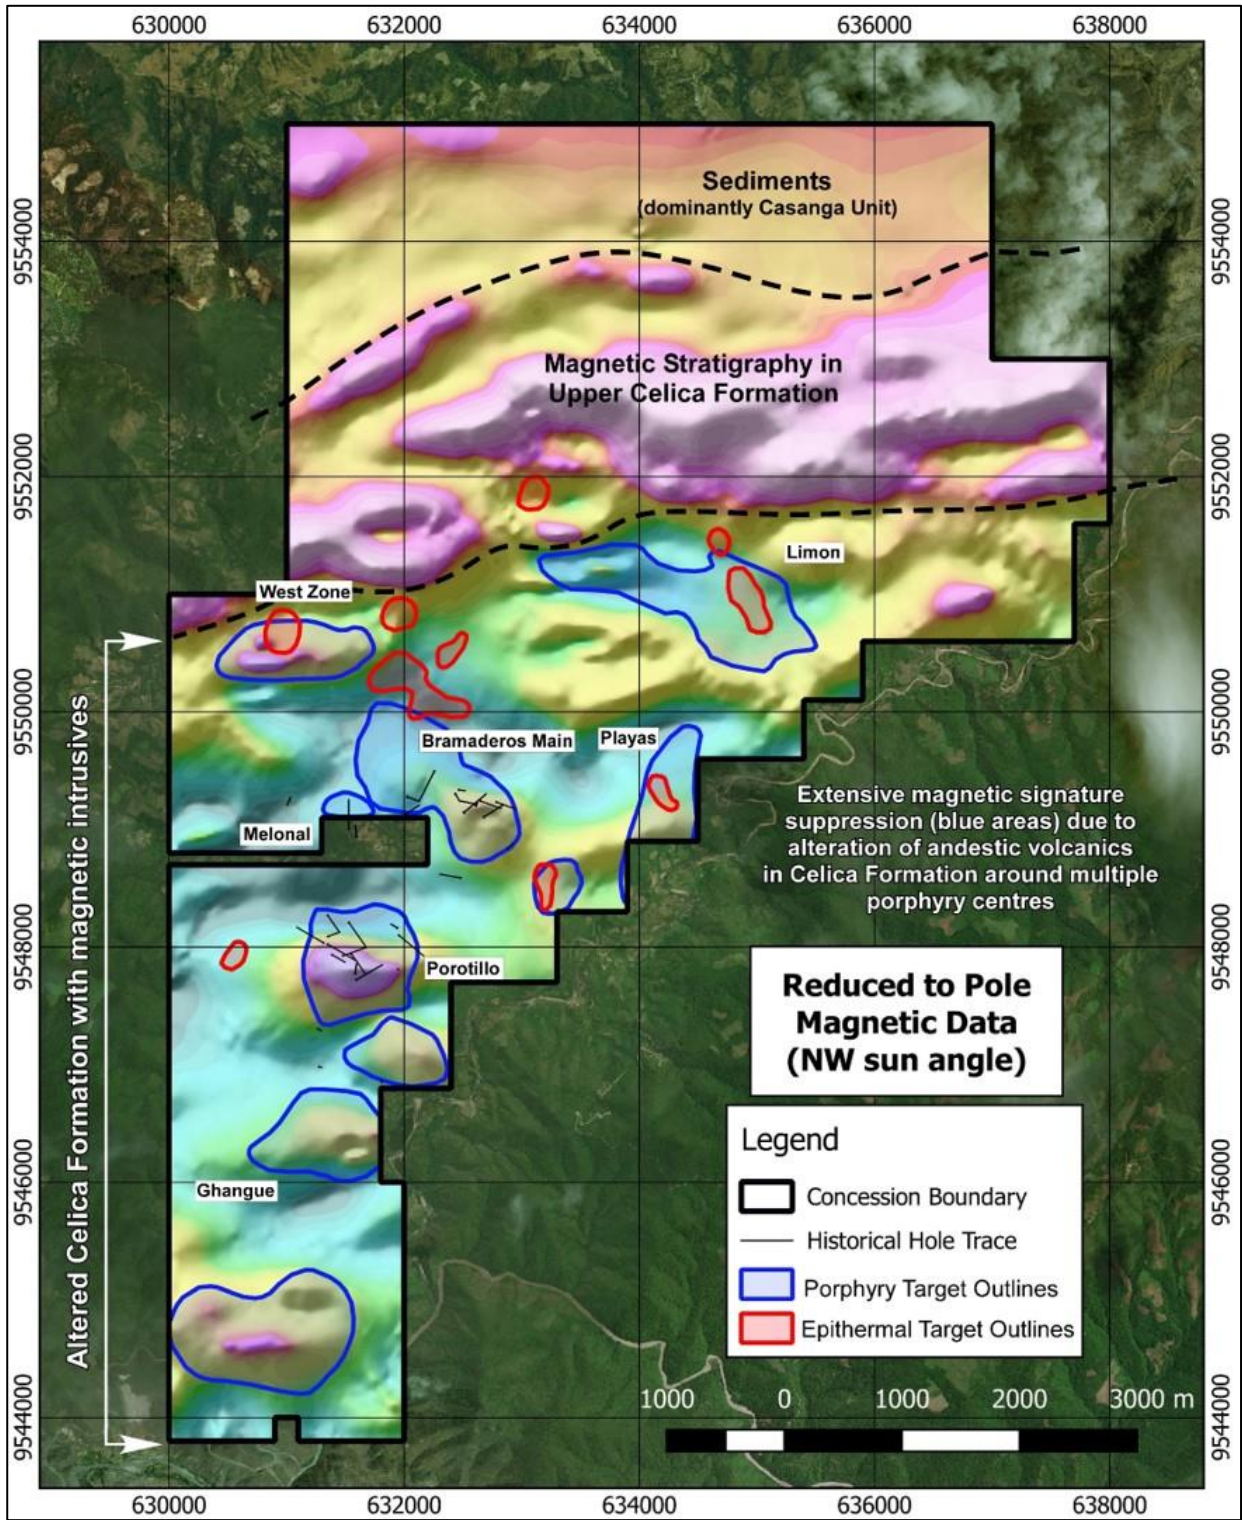

Figure 3: Bramaderos project showing the location of the gold-copper porphyry targets, and the West Zone epithermal gold system. The Limon target is located in the northern portion of the concession, and comprises a porphyry gold-copper target domain, with areas of epithermal overprint. The background image is from the recently completed detailed magnetics survey.
